REVISIONS

Name	Version	Reason for Revision	Date
Mark Gleason	0.001	First Draft	June 21, 2007
Nour Khartabil	1.0	Rounded out first draft	January 29, 2008
Jason Cook	1.1	Included required fields	February 8, 2008
Nour Khartabil	1.2	Rounded out Second draft	February 15, 2008
Jason Preder	1.3	Added Event_Location information to the document.	April 17, 2008
Nour Khartabil	1.4	Changed the tag names to be all lowercase	June 2, 2008
Jeff Ozark	2.0	Corrected general errors	June 30, 2008
Jeff Ozark	2.1	Corrected small errors after sending out ver. 2.0	July 21, 2008
Barb Koren	2.2	Modified descriptions for jobaddress1, jobdescription and orderdescription in Ticket Node, In section 3.9 changed event_type=TextMsg to event_type=Textmsg	September 18, 2008
Jeff Ozark	2.3	Modified sample XML messages to remove event_sub_type in the following sections: 3.8, 3.10, 3.13, 3.14, 3.15	October 3, 2008
Jeff Ozark	2.4	Modified vendorname tag to be a datatype string(30) in the ticket node description section	November 20, 2008
Jeff Ozark	2.5	Added 2 tags to the Void ticket message: ticketid and shiplocation	June 1, 2010

1. INTRODUCTION

1.1 PURPOSE

This document describes the functionality necessary to implement Integra XML.

1.2 DEFINITIONS, ACRONYMS AND ABBREVIATIONS

Integra XML interface is designed to eliminate the interdependencies that exist between Integra Dispatch system and signaling vendors.

The signaling vendors will place incoming messages into an inbound queue, to be read by the Dispatch System. Status updates and other messages related to the dispatching of vehicles will be placed in this queue for the Dispatch System to act upon. Once the Dispatch System has processed the messages, it is the responsibility of the Dispatch System to remove the messages from the inbound queue.

Integra XML – Technical Specification

Outbound messaging from the Dispatch System to the signaling vendor works similarly. The Dispatch System places outbound messages, including new tickets, cancelled tickets, requests for positions, and messages to vehicle operators in an outbound queue. The signaling vendor will read from this queue and process the messages appropriately. Once a message has been processed, it will be removed from the queue by the signaling vendor.

This architecture will eliminate the dependencies that currently exist between the Dispatch Systems and signaling vendors. This will enhance the quality of integrations by reducing redundant support efforts and the difficulty customers and customer service providers have when attempting to identify why their vehicles are not displaying the correct status.

1.3 OVERVIEW

Microsoft Message Queuing (MSMQ) is a middleware technology that allows applications to send and receive message from each other, either synchronously or asynchronously. Because MSMQ guarantees message delivery, it provides reliability even for networks and systems that are offline.

Message queues can be created to be either transactional or non-transactional, in this environment by default we will be using transactional queues. If a queue is created transactional it will only process transactional messages. Likewise, if a message arrives as part of a transaction in a non-transactional queue it will be rejected.

By default, the entire MSMQ message flow is an in-memory operation. This means that a message is created on a client, sent to the destination message queue, and stored until code is ready to accept and process the message, all in memory. Although it is very fast, this method of message delivery holds certain risks. If the sender machine is taken down for some reason before the message is sent to the destination machine, or if the destination machine accepts the message into its message queue and then fails before it can process the message, the message is lost entirely.

2 XML TRANSPORT DEFINITION

The purpose of the Systech_Signal_Message will be to transport the messages to/from Integra dispatch systems and signaling vendors.

The header section of the message will allow the dispatch system to add information to track errors or events

```
<?xml version="1.0"?>
<Systech_Signal_Message xmlns:xsd="http://www.w3.org/2001/XMLSchema"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">
  <eventid>{307C5E8C-DA28-4BB5-8D84-38A7C5CA2155}</eventid>
  <vehicle_number>0023</vehicle_number>
```

The event data section contains the appropriate data for the event that just occurred. This message body will change with each message.

```
<event>
  <event_date_time>2008-06-27T11:24:48</event_date_time>
  <event_category>Signal</event_category>
  <event_type>Status</event_type>
  <event_sub_type>3</event_sub_type>
  <event_origin_ipaddr>192.168.0.71</event_origin_ipaddr>
  <event_origin_machname>PCNAME</event_origin_machname>
  <event_origin_username>Tester</event_origin_username>
```

Integra XML – Technical Specification

```
<event_date_time_utc>2008-06-27T16:24:48</event_date_time_utc>
<event_origin>Testing</event_origin>
</event>
```

2.1 XML MESSAGE DESCRIPTION

The purpose of the systech_signal_message is to transport signaling data between signaling vendors and Integra Dispatch system.

Integra XML – Technical Specification

2.1.1 Section Usage

The header contains constant data that will be part of every message.

Table 1: Systech_Signal_Message Node - XML Transport Field Requirements and Descriptions

eventid DataType STRING(38) REQUIRED	Unique GUID generated by either Dispatch system or the signal vendor
vehicle_number REQUIRED	Unique Vehicle Identifier

Signal Data

The signal data will contain specific information describing the signal event that is occurring. The Event Node is composed of the following information.

Table 2: Event Node - XML Transport Field Requirements and Descriptions

event_date_time REQUIRED	Date and Time when the event occurred (local vehicle time)
event_category REQUIRED	Category of message, TxtMessage, Signal, GPS, Informational, Ticket and Order
event_type REQUIRED	Type of event Status, Ticket, Order, TxtResponse, TruckStatus, IsOrderComplete, InputLatLongRadius, RequestOrderID, RequestTicket, GetPrintTicket, Textmsg, LeftOver, AddWater, SetArrivePlant and GetPlantInfo
event_sub_type string Sub type of event REQUIRED only for Event_type: Status	Status values -2: Not Responding -1: Bad Truck 0: Invalid Message 1: Ticketed 2: Loading 3: Leave Plant 4: Arrive Job 5: Begin Pour 6: End Pour 7: Leave Job 8: Arrive Plant/In Yard 9: In Service 10: OutService 11: To Shop 12: Leave Shop 13: To Lunch 14: Leave Lunch 15: Start Misc 16: End Misc 17: Pour Delay 18: Resume Pour 19: Wash Out 20: Emergency 21: Next Job 22: Job Complete 23: Customer Comp 24: Call 25: Leftover Cnc 26: PTT 27: Show Message 28: Driver Ack 29: Washout ON 30: Washout OFF 31: Finish Load 32: Outservice Wash 33: Water Added 34: Ready To Load Ticket Values 1: NEW = New Ticket 2: CHG = Change Ticket 3: VOID = Void Ticket
event_origin_ipaddr REQUIRED	If the vehicle has an IP address or the signal vendor's IP address; 0.0.0.0 if unknown
event_message_string	This is the way we pass data to and from the signal vendor
event_location	You can pass an optional location (3 bytes) in this field that will add additional functionality to some messages like an Arrive Plant truck status.

Integra XML – Technical Specification

event_origin_machname REQUIRED	Signal vendors machine name
event_origin_username REQUIRED	User name
time_to_live	Used if it's a timed event, most of the time it will be 0
Node	Types of nodes are: Order, Ticket, Trucks, and Plants. See tables below for further information. Some events may not have these nodes
event_date_time_utc	Universal time when the event occurred
event_origin	Originator of the event

2.1.2 Field Requirements and Descriptions

The following tables illustrate the data elements that are expected for inbound and outbound messages sent in between the signaling vendor and the Dispatch System. For the sake of consistency, a message is considered "inbound" if it is sent from the signaling vendor to the Dispatch System and "outbound" if it is sent from the Dispatch System to the signal vendor.

Table 3: Order Node - XML Transport Field Requirements and Descriptions

orderid DATATYPE INTEGER	ORDER ID
orderloc DATATYPE STRING(3)	ORDER LOCATION
schedloc DATATYPE STRING(3)	LOCATION NUMBER FROM WHICH THE ORDER IS SCHEDULED TO SHIP
billloc DATATYPE STRING(3)	LOCATION NUMBER FROM WHICH THE ORDER WILL BE BILLED
ordernbr DATATYPE STRING(8)	ORDER NUMBER
custname DATATYPE STRING(30)	CUSTOMER NAME
backcolor DATATYPE INTEGER	BACK COLOR ON THE ORDER STACK
textcolor DATATYPE INTEGER	TEXT COLOR ON THE ORDER STACK
bordercolor DATATYPE INTEGER	BORDER COLOR ON THE ORDER STACK
ordertypecode DATATYPE STRING(1)	ORDER TYPE (R=READY MIX OR A=AGGREGATE)
status DATATYPE STRING(1)	ORDER STATUS
paymethod DATATYPE STRING(1)	THE METHOD THE CUSTOMER WILL BE PAYING FOR MATERIAL
shipcode DATATYPE STRING(1)	SHIP CODE (P=PICKUP OR D=DELIVERY)
travelmins DATATYPE INTEGER	THE MINUTES IT TAKES TO GET TO THE JOB FROM THE PLANT
unloadmins DATATYPE INTEGER	ESTIMATED POUR TIME FOR EACH LOAD ON THE SPECIFIC ORDER
zone DATATYPE INTEGER	ZONE
pricecolcode DATATYPE STRING(1)	PRICE COLUMN FOR COD ORDERS
custnbr DATATYPE STRING(8)	CUSTOMER NUMBER

Integra XML – Technical Specification

jobnbr DATATYPE STRING(6)	JOB NUMBER
jobdesc DATATYPE STRING(40)	JOB DESCRIPTION
orderdesc DATATYPE STRING(40)	ORDER DESCRIPTION
jobcity DATATYPE STRING(16)	JOB CITY
jobstate DATATYPE STRING(16)	JOB STATE
mappage DATATYPE STRING(10)	MAP PAGE
block DATATYPE STRING(3)	BLOCK NUMBER ON BLOCK FORM
lot1 DATATYPE STRING(3)	LOT 1 ON BLOCK FORM (DISPATCH ONLY)
lot2 DATATYPE STRING(3)	LOT 2 ON BLOCK FORM (DISPATCH ONLY)
lot3 DATATYPE STRING(3)	LOT 3 ON BLOCK FORM (DISPATCH ONLY)
ponumber DATATYPE STRING(15)	PURCHASE ORDER NUMBER
pin DATATYPE STRING(4)	PERSONAL IDENTIFICATION NUMBER
projectref DATATYPE STRING(10)	ORDER PROJECT REFERENCE
creditcardnbr DATATYPE STRING(19)	CREDIT CARD NUMBER
creditexpiredate DATATYPE STRING(7)	CREDIT CARD EXPIRATION DATE
recstatus DATATYPE STRING(1)	MODIFIED STATE OF THE RECORD (U : UPDATED , D : DELETED)
waterreducerprod DATATYPE STRING(10)	WATER REDUCER PRODUCT ON ADDITIONAL ORDER INFORMATION
airproduct DATATYPE STRING(10)	AIR PRODUCT ON ADDITIONAL ORDER INFORMATION
acceleratorprod DATATYPE STRING(10)	ACCELERATOR PRODUCT ON ADDITIONAL ORDER INFORMATION
waterreducerqty DATATYPE DOUBLE	WATER REDUCER QUANTITY ON ADDITIONAL ORDER INFORMATION
acceleratorqty DATATYPE DOUBLE	ACCELERATOR QUANTITY ON ADDITIONAL ORDER INFORMATION
airentrainment DATATYPE DOUBLE	AIR QUANTITY ON ADDITIONAL ORDER INFORMATION
priority DATATYPE STRING(2)	PRIORITY FOR THE ORDER
taxcode DATATYPE STRING(2)	TAX CODE ON ORDER
taxstate DATATYPE STRING(2)	TAX STATE ON ORDER
truckrequest DATATYPE STRING(2)	TYPE OF THE VEHICLE FOR DELIVERING
worktype DATATYPE STRING(2)	WORK TYPE
misctype1 DATATYPE STRING(2)	WEATHER (DISPATCH ONLY)

Integra XML – Technical Specification

misctype2 DATATYPE STRING(2)	MACHINE (DISPATCH ONLY)
miscfield1 DATATYPE STRING(2)	MISCELLANEOUS FIELD 1
miscfield2 DATATYPE STRING(2)	MISCELLANEOUS FIELD 2
miscfield3 DATATYPE STRING(2)	MISCELLANEOUS FIELD 3
miscfield4 DATATYPE STRING(2)	MISCELLANEOUS FIELD 4
custphonnbr STRING (10)	CUSTOMER PHONE NUMBER
staggered STRING (1)	IF POUR SPLIT BETWEEN TWO PLANTS, DETERMINES IF THE LOADS WILL BE ALTERNATED BETWEEN THE PLANTS OR QUANTITY REQUIRED FROM ONE PLANT BE SHIPPED IN ITS ENTIRETY BEFORE SHIFTING TO NEXT PLANT (T or F)
minloadtable STRING (2)	PRICING AND COSTING TIER FOR THE MINIMUM LOAD CHARGE
printweight STRING (1)	FLAG TO INDICATE IF BATCH WEIGHTS SHOULD BE PRINTED (T or F)
cementsource STRING (20)	CEMENT SOURCE FOR THE ORDER
salesmannbr STRING (8)	SALESMAN NUMBER ON ORDER
trucklimit DATATYPE INTEGER	THE NUMBER OF TRUCKS THAT ARE ASSIGNED TO THE ORDER ON THE MIXES LINE
qtyperhour DATATYPE DOUBLE	THE AMOUNT OF CONCRETE PER HOUR THE CUSTOMER REQUESTED IN THE QTY/HR FIELD ON THE MIXES LINE
loads DATATYPE INTEGER	NUMBER OF LOADS THAT WERE SHIPPED
scheduletype DATATYPE STRING(1)	HOW SCHEDULE WAS GENERATED
overnightpour DATATYPE STRING(1)	CHECKBOX INDICATING THAT THE ORDER WILL GO ALL NIGHT (T or F)
permanent DATATYPE INTEGER	FLAG TO INDICATE IF IT IS A STANDING ORDER (1 or 0)
prevshippedlds DATATYPE INTEGER	TOTAL NUMBER OF SHIPPED LOADS FOR ORDER
prevorderid DATATYPE INTEGER	ORDER ID IF IT COMES FROM A PERMANENT ORDER
completed DATATYPE STRING(1)	INDICATING THAT THE ORDER IS DONE (MARKED BY END OF DAY PROCESS) (T or F)
plus DATATYPE STRING(1)	INDICATES THAT ONE "PLUS" LOAD WILL BE REQUIRED OVER AND ABOVE THE QUANTITY ENTERED ON ORDER (T or F)
pos DATATYPE STRING(1)	POINT OF SALE IDENTIFIER
metric DATATYPE STRING(1)	CHECKBOX FOR TRACKING AND PRICING THE ORDER AS A METRIC ORDER (T or F)
customertype DATATYPE STRING(1)	MARKET SEGMENT
latitude DATATYPE DOUBLE	JOB LATITUDE ON ADDITIONAL ORDER INFORMATION
longitude DATATYPE DOUBLE	JOB LONGITUDE ON ADDITIONAL ORDER INFORMATION
jobradius DATATYPE DOUBLE	JOB RADIUS FIELD ON ADDITIONAL ORDER INFORMATION
copyorderid DATATYPE INTEGER	ORDER ID IF IT IS A COPIED ORDER

Integra XML – Technical Specification

zipcode DATATYPE STRING(10)	ZIP CODE ON ORDER
runningjobtotals DATATYPE STRING(1)	CHECKBOX RUNNING JOB TOTALS ON ADDITIONAL ORDER INFORMATION (T or F)
lastupdated DATETIME	DATE TIME STAMP OF LAST TIME RECORD WAS UPDATED
numberofproducts DATATYPE INTEGER	NUMBER OF PRODUCTS
OrderProducts Node	
productnumber DATATYPE STRING(10)	PRODUCT NUMBER
description DATATYPE STRING(3)	PRODUCT DESCRIPTION
quantity DATATYPE DOUBLE	SALES QUANTITY ON TICKET
um DATATYPE STRING(2)	PRODUCT UNIT OF MEASURE
unitprice DATATYPE DOUBLE	UNIT PRICE OF PRODUCT
price DATATYPE DOUBLE	UNIT PRICE TIMES SALES
tax DATATYPE DOUBLE	TAX AMOUNT
taxcode DATATYPE STRING(2)	PRODUCT TAX CODE
orderedquantity DATATYPE DOUBLE	TOTAL QUANTITY ORDERED
cumulativequantity DATATYPE DOUBLE	TOTAL QUANTITY DELIVERED
loadsize DATATYPE DOUBLE	SIZE OF PRODUCT ON TICKET
categorycode DATATYPE STRING(3)	CATEGORY CODE OF PRODUCT
slump DATATYPE DOUBLE	SLUMP OF MAIN PRODUCT
bagmix DATATYPE DOUBLE	PRODUCT NUMBER OF BAGMIX
pricequantity DATATYPE DOUBLE	PRICE QUANTITY
priceum DATATYPE STRING(2)	PRICE UM
mixnumber DATATYPE STRING(10)	MIX NUMBER
prevshippedquantity DATATYPE DOUBLE	PRODUCTS PREVIOUS SHIPPED QUANTITY
o_quantity DATATYPE DOUBLE	CUSTOMARY PRODUCT QUANTITY
o_pricequantity DATATYPE DOUBLE	CUSTOMARY PRODUCT PRICE
alt_description DATATYPE STRING(30)	PRODUCT ALTERNATE DESCRIPTION
tax DATATYPE DOUBLE	TAX AMOUNT

Integra XML – Technical Specification

Table 4: Ticket Node - XML Transport Field Requirements and Descriptions

ticketid DATATYPE INTEGER	TICKET ID NUMBER
shipcode1 DATATYPE STRING(1)	SHIP CODE
tickettype1 DATATYPE STRING(1)	TICKET TYPE
plant DATATYPE INTEGER	PLANT FROM WHICH THE TICKET WAS SHIPPED
ticketnumber DATATYPE STRING(6)	TICKET NUMBER
ordernumber DATATYPE STRING(8)	ORDER NUMBER
load DATATYPE INTEGER	LOAD SIZE
loads DATATYPE INTEGER	NUMBER OF LOADS THAT WERE SHIPPED
leftover DATATYPE DOUBLE	LEFTOVER
ticketdate DATATYPE TIMESTAMP	TICKET DATE
tickettime DATATYPE TIMESTAMP	TICKET TIME
shiplocation DATATYPE STRING(3)	SHIP LOCATION NUMBER
shiplocationname DATATYPE STRING(20)	SHIP LOCATION NAME
worktype1 DATATYPE STRING(30)	WORK TYPE
ponumber DATATYPE STRING(15)	PURCHASE ORDER NUMBER
zone DATATYPE INTEGER	ZONE
mappage DATATYPE STRING(10)	MAP PAGE
ticketsubtotal DATATYPE DOUBLE	TICKET SUBTOTAL
tickettax DATATYPE DOUBLE	TICKET TAX
tickettotal DATATYPE DOUBLE	TICKET TOTAL
trucknumber DATATYPE STRING(8)	TRUCK NUMBER
drivernumber DATATYPE STRING(8)	DRIVER NUMBER
drivername1 DATATYPE STRING(42)	DRIVER NAME IE: SMITH, JOHN
